ABSTRACT

This report updates the previous basic reporting on three of the major power plants in Kiangsi Province, southeastern China. The report is based on 1970 photography through November.

No change was apparent at the Hsin-yu Hydro Power Plant Chiang-kou. Hsin-yu Thermal Power Plant Fen-1 and Nan-chang Thermal Power Plant Chi-li-chieh both appeared externally complete for the first time on July and August 1970 photography, respectively. All three plants were operating.

#### INTRODUCTION

This report covers the following three major power plants in Kiangsi Province, southeastern China (see Figure 1).

1. Hsin-yu Thermal Power Plant Fen-i
2. Hsin-yu Hydro Power Plant Chiang-kou
3. Nan-chang Thermal Power Plant Chi-li-chieh

**BASIC DESCRIPTION**

Construction at the Hsin-yu Thermal Power Plant Fen-i has been completed. No new buildings or structures have been observed at the plant since September 1969, the date of the latest photography used in the previous report. Smoke was emanating from the stack near the boilerhouse indicating that the plant was operating. The quality of the photography precludes identification of the number of transformers at the switching yard or next to the generator hall.

## BASIC DESCRIPTION

No changes have been observed at the Hsin-yu Hydro Power Plant Chiang-kou since October 1969, the date of the latest imagery used in the previous report. On small-scale photography of July 1970, minor turbulence was visible in the tailrace indicating that the plant was operating. The quality of the photography precludes determining whether the second transformer had been installed.

**BASIC DESCRIPTION**

The Nan-chang Thermal Power Plant Chi-li-chieh apparently has been completed since September 1969, the date of the latest photography used in the previous report. However, smoke from the stacks and small-scale photography preclude detailed analysis.

The plant was operating when observed in August 1970. Heavy smoke was emanating from all three stacks.
